LOCKERBOXsmart locker systems are a modern solution designed to streamline the management of essential resources such as documents, electronic equipment, or tools, providing full control and organization within a company or public institution.

The TEMREX smart office system (TSoffice) enables fast and secure transfer, collection, and deposit of items using a single locker unit. Users interact with the system via an intuitive touchscreen interface on the locker or through a mobile app*, which guides them step by step, minimizing the risk of errors.

System management is handled via a web application or directly from the locker. Administrators have full access to the operational history and real-time status of all locker compartments.

The modular design of the system allows the creation of a locker with the number and size of compartments tailored to the specific process or work environment. Thanks to its flexibility, the system easily adapts to various spaces and requirements—regardless of industry or scale of operations.

System Features
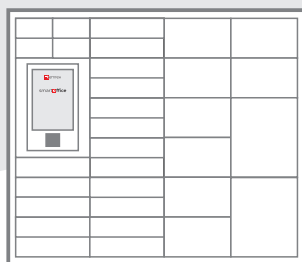

WEB *APPLICATION*
ADMINISTRATOR

FREE ACCESS
via web browser

SIMPLE LOGIN
username + password + deployment ID

USER MANAGEMENT
add + edit + delete + assign roles + CSV import + assign RFID cards

FULL INSIGHT
into the history of operations and logs from all lockers

ABILITY TO MANUALLY OPEN LOCKERS

ACCESS TO ALERTS REPORTED BY THE LOCKER

MOBILE *APPLICATION**
USER

PARCEL HANDLING
send / receive

DEPOSIT MANAGEMENT
create deposits + ability to open a locker multiple times during storage

*Available Soon

How We Support Your Business

ADMINISTRATION & HR

The Smart Office system enables secure transfer of documents between departments and employees. 24/7 access streamlines the flow of materials and eliminates queues, while activity logs and remote access management simplify work organization.

HOSPITALS & MEDICAL FACILITIES

Smart Office allows quick access to equipment and protective supplies, ensuring touchless and hygienic use. Full tracking of all operations enhances safety for both staff and patients.

SCHOOLS & UNIVERSITIES

The system provides secure storage for books, backpacks, and electronic devices, accessible via personalized QR codes or access cards. Activity logs offer full control over item circulation, ensuring security and helping maintain order in shared spaces.
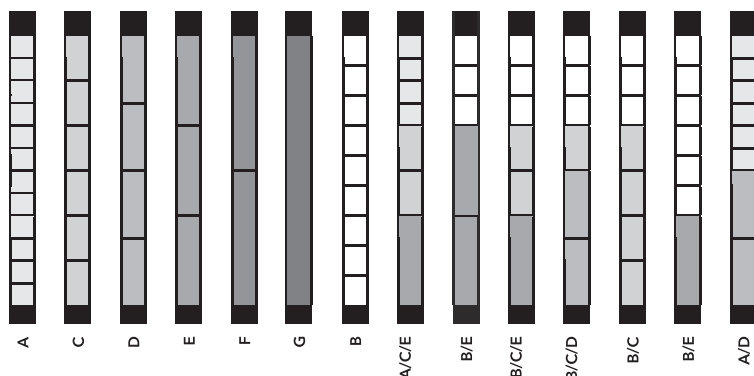

LIBRARIES

The system enables self-service check-in and check-out of collections 24/7, as well as secure storage of electronic devices, relieving staff and improving service for library users.

HOTELS

The system allows safe deposit of luggage and guests' valuables, offering 24/7 self-service access and streamlining front desk operations, enhancing both comfort and security during the stay.
